Training Labs

A front row seat for every student in the class!

Welcome to the Teacher's AIDE[™] Computer Supervisory System (CSS). The Teacher's AIDE[™] CSS is a family of hardware-based audio/video switching systems that can be installed in any computer training lab with VGA compatible graphics. This includes IBM compatible PC[™]s and Macintosh PC[™]s running any operating system. Any organization that uses a computer lab for training would benefit from having one of these systems.

The Teacher's AIDE[™] (Advanced Instructional Delivery for Education) is an ideal training system for schools or businesses. The Teacher's AIDE[™] enables the trainer to address the instructional needs of individuals, groups, and the entire classroom. For starters, each student can now be helped without drawing attention to their request for aid. Instead, the students simply press the Teacher Call Button when they need assistance. The Teacher's AIDE[™] teacher will save valuable time, as they can assist individual students or groups in the training lab without having to waste time walking around the room. The Teacher's AIDE[™] also allows the teacher to broadcast any student station audio and video to other students, or to large screen projectors. This allows the students to demonstrate their work to each other very easily. The Teacher's AIDE[™] actually transforms the lab of individual PC's into an interactive group

training environment.Â If you are serious about improving instruction, our system will help you realize significant gains in instructional productivity.
